

Review guide

1 What this is

iTantra is an Android app idea for sending short messages during a disaster when normal phone service may be unavailable.

You can speak or type a message, check its text, and send it.

The app also keeps a list of sent and received messages so you can return to them.

This website simulates the app with fake speech, messages, network results, and timing. It is not the real Android app.

Judge whether the flow feels right, what confuses you, and what seems missing. Ignore speech accuracy, real network behavior, and exact pixel polish.

2 How to use the site

Open <https://itantra-app-flow-review.kotesarajveer.chatgpt.site/> in a browser. If asked, sign in with ChatGPT. A wide screen shows the phone and controls side by side; on a narrow screen, scroll below the phone for the controls.

Use the phone frame as if it were the app. The Simulator beside or below it makes fake events happen: speech results, send failures, incoming messages, and recipient confirmation. Before starting, leave the recommended choices selected and press Reset review.

3 Guided walkthrough

01 Start on Main

What to try

Look at the Main screen. Find Hold to talk, Hands-free, Text, and Logs. Open Logs, then return to Main with the phone's Back control.

What to notice

Does the first screen make the next action clear? Does Back take you where you expected?

Walkthrough, continued

02 Speak, review, and send

What to try

Press and hold Hold to talk, then release it. Wait for the sample text. Edit it if you want, then press Send. Open Logs.

What to notice

The phone shows Recording and Transcribing before New message. The text is reviewable before sending. A sent row first says Awaiting ACK; sending does not raise the unread count.

03 Confirm a sent message

What to try

In Simulator, press Simulate recipient ACK. Look again at the sent row in Logs.

What to notice

The latest pending sent row changes from Awaiting ACK to Delivered. Does that change feel clear?

04 Try Hands-free

What to try

Return to Main and open Hands-free. In Simulator, press Simulate speech in Hands-free. On the phone, press Done after Recording appears. From New message, press Back and Discard to return to Main.

What to notice

Hands-free begins at Listening, then Recording, then Transcribing. It opens the same New message review screen. The simulator button only works while Hands-free is open.

05 See a voice failure

What to try

Return to Main. In Simulator, set Next voice result to Transcription fails. Hold to talk and release. Try Continue as text. You can also repeat this step and use Try again.

What to notice

The failure is visible. Continue as text opens an editable message; Try again returns you to voice input. Choose Transcript ready afterward.

Walkthrough, continued

06 Type and see a send failure

What to try

Return to Main and press Text. Type a message. In Simulator, set Next send result to Not connected, then press Send. Change it to Sent to transport and press Send again.

What to notice

The failed send keeps your draft on New message. A successful send returns to Main and adds a sent row to Logs.

07 Receive and read

What to try

In Simulator, change Incoming message if you like, then press Simulate receive. Look at the Logs badge. Open Logs, then open the new incoming row. Press Back to return to Logs.

What to notice

The badge counts unread incoming messages. Opening Logs alone does not reduce it. Opening that message does, and its unread marker goes away.

08 Back out of a draft

What to try

Return to Main, press Text, and type anything. Press Back, then Cancel. Press Back again, then Discard.

What to notice

Cancel keeps the draft. Discard returns to Main and removes it. Is the warning clear enough?

09 Check an empty list

What to try

In My assumptions, switch Starting history to Empty Logs. This resets the review. Open Logs from Main.

What to notice

The empty state appears. Afterward, you can switch back to Three sample unread messages and press Reset review.

4 My assumptions

These are the site's assumption choices and statements. The words below match the site. Tick one response per item and tell us why, especially for Change or Unsure.

1. Hands-free state change

Simulated speech event
Recommended
Recording on entry

☐ Accept ☐ Change ☐ Unsure

Reason / change:

2. Starting history

Three sample unread messages
Recommended
Empty Logs

☐ Accept ☐ Change ☐ Unsure

Reason / change:

3. Recipient acknowledgement

Trigger in simulator
Recommended
After a short delay

☐ Accept ☐ Change ☐ Unsure

Reason / change:

4. Speech, network results and incoming messages are simulated; the site never uses your mic or radio.

☐ Accept ☐ Change ☐ Unsure

Reason / change:

5. Voice yields one final sample transcript. No streaming transcript or automatic send is implied.

☐ Accept ☐ Change ☐ Unsure

Reason / change:

6. The language list matches the eight options in the current Android selector. Kannada and Malayalam are target languages, but not current selector options.

☐ Accept ☐ Change ☐ Unsure

Reason / change:

7. A successful transport write appears in Logs as Awaiting ACK; only an ACK changes it to Delivered.

☐ Accept ☐ Change ☐ Unsure

Reason / change:

8. Sample history uses today's date and local clock format. New messages use your browser's local time.

☐ Accept ☐ Change ☐ Unsure

Reason / change:

9. This review keeps changes in this browser tab across reloads. Reset restores the selected starting history.

☐ Accept ☐ Change ☐ Unsure

Reason / change:

5 Feedback table

Name the screen, what you did, what you expected, and what actually happened. Tick one severity level. Use extra rows on the next page if needed.

Screen	What I did	What I expected	What happened	Severity
				☐ blocks me ☐ annoying ☐ nitpick
				☐ blocks me ☐ annoying ☐ nitpick
				☐ blocks me ☐ annoying ☐ nitpick
				☐ blocks me ☐ annoying ☐ nitpick

Feedback and final questions

Screen	What I did	What I expected	What happened	Severity
				☐ blocks me ☐ annoying ☐ nitpick
				☐ blocks me ☐ annoying ☐ nitpick

6 Overall questions

Which screen felt best, and why?

Which screen felt worst, and why?

What felt missing?

What felt unnecessary?
