

Review guide

1 What this is

iTantra is a planned Android app for short messages during a disaster when ordinary phone service may be unavailable.

It can carry a private message toward a trusted contact through other nearby phones, even when that contact is far away.

It also lets someone request help through SOS or choose to respond to a nearby request.

The website is a simulation with fake contacts, speech, radio delivery, QR scans, timing, and replies. It is not the real app.

Judge whether it feels right, what confuses you, and what seems missing. Ignore speech accuracy, real network behavior, and exact pixel polish.

2 How to use the site

Open: <https://itantra-app-flow-review.kotesarajveer.chatgpt.site/>

Use the phone frame like the app. The controls beside it (or below it on a narrow screen) trigger fake events and failures. They are not part of the app. Start with Reset full review; confirm the reset.

3 Guided walkthrough

01 First launch and readiness

What to try

Tap Nearby devices, Notifications, Microphone, and Camera so each says Allowed. Tap Enter iTantra. Open Readiness from Home, then return Home.

What to notice

Can you tell what is ready and what would stop a feature?

02 Exchange a trusted identity

What to try

Open Contacts, then My identity to see your QR. Return to Contacts. Tap Scan a contact QR; leave Next QR scan on New identity and tap Simulate scan. Tick the identity-check box and add Rahul.

What to notice

The QR creates a contact only after you confirm it. Does that feel safe and understandable?

Walkthrough: messages

03 Speak, choose a recipient, send

What to try

On Home, look through Message language (all 10 choices). Hold Hold to talk, release, and wait for the draft. Edit it, choose Rahul as Trusted recipient, switch on Urgent message, then Send message.

What to notice

Speech opens an editable draft. Sending requires a trusted recipient and puts the message in Logs as Queued.

04 Follow delayed delivery

What to try

Open Logs and the message. In the controls, tap Relay accepts encrypted copy, then Recipient confirms delivery. Check the row or detail after each tap.

What to notice

Relayed means another phone carries it; Delivered means Rahul confirmed delivery. Rahul never had to be nearby.

05 Try Hands-free and voice failure

What to try

Go Home > Hands-free. Tap Simulate speech in Hands-free beside the phone, then Done. Back out and Discard the draft. Set Next voice result to Transcription fails; try Hold to talk again, then Continue as text. Tap Back from the empty draft.

What to notice

Both voice paths use the same draft. A failed voice result offers a way to type. Restore Transcript ready after this.

06 Receive, read, and hear text

What to try

Tap Receive once beside the phone. See the Logs badge, open Logs, then open the new received row. Tick Next speech playback fails and tap Play aloud. Try Receive duplicate copy as well.

What to notice

Opening Logs alone leaves the item unread; opening the row marks it read. Speech failure leaves the text. A duplicate adds no second row.

07 Back out of a typed draft

What to try

Return Home > Text. Type a few words. Tap Back, then Cancel. Tap Back again, then Discard.

What to notice

Cancel keeps the draft; Discard removes it. Is the warning clear?

Walkthrough: SOS and recovery

08 Respond to someone else's SOS

What to try

Open Emergency, tap Start Emergency Mode, then turn on Available to help. Tap Incoming SOS offer beside the phone. Review the limited details and tap Accept. Type a reply and Send. Try Codes match, confirm, then End SOS session.

What to notice

Before acceptance, no name or full note is shown. The session starts encrypted but unverified; matching codes verifies the nearby device, not a person's role.

09 Request help through relays

What to try

From Home, tap Request help · SOS. Choose a category and language, then Start SOS search; confirm the dialog. Tap No answer · widen search, then Responder accepts through relay. Tap Receive SOS session reply, then Play latest reply aloud.

What to notice

The search widens without a nearby answer. Relayed replies may be delayed, and Codes match is unavailable when the other person is not nearby.

10 Test SOS endings

What to try

End that session. From Home, start another SOS and tap Two responders accept. End it, start another, then tap SOS / offer expires. Tap Back to home, start one more SOS, and use Cancel SOS. Confirm the dialog.

What to notice

Only the first responder connects. Expiry and cancellation have different explanations. Does each ending feel clear?

11 Check degraded service and identity loss

What to try

In the controls, choose Bluetooth off under Apply condition and tap Apply condition. Open Readiness, then restore with All ready · no internet. In Readiness & identity, tap Simulate reinstall / identity loss and confirm. Open Contacts and Rahul.

What to notice

Saved messages stay visible. The old trusted contact cannot receive a new private message until a fresh QR exchange.

4 My assumptions

Tick one box for each item. For Change or Unsure, say what you would prefer. These seven statements match the site's My assumptions list word for word.

1. All communications, contacts, QR scans, device encounters, voice and speech playback are simulated.

☐ Accept ☐ Change ☐ Unsure

Reason / change:

2. A trusted message goes to one explicitly chosen contact. Recipient selection is independent of nearby radio discovery.

☐ Accept ☐ Change ☐ Unsure

Reason / change:

3. Queued, Relayed, Delivered, Expired and Unknown are separate visible states; relay acceptance never means recipient delivery.

☐ Accept ☐ Change ☐ Unsure

Reason / change:

4. "Available to help" is opt-in and only works while Emergency Mode can participate.

☐ Accept ☐ Change ☐ Unsure

Reason / change:

5. One confirmed responder owns an SOS session; a second acceptance is shown as too late.

☐ Accept ☐ Change ☐ Unsure

Reason / change:

6. Nearby-device verification checks the active session, not a person's role or intentions.

☐ Accept ☐ Change ☐ Unsure

Reason / change:

7. Text persists when speech playback fails. Simulated restart preserves messages; simulated reinstall changes identity.

☐ Accept ☐ Change ☐ Unsure

Reason / change:

5 Feedback table

Name the screen, what you did, what you expected, and what happened. Tick one severity level. If you can, repeat the action before writing it down.

Screen	What I did	What I expected	What happened	Severity
				☐ blocks me ☐ annoying ☐ nitpick
				☐ blocks me ☐ annoying ☐ nitpick
				☐ blocks me ☐ annoying ☐ nitpick
				☐ blocks me ☐ annoying ☐ nitpick

Feedback and final questions

Screen	What I did	What I expected	What happened	Severity
				☐ blocks me ☐ annoying ☐ nitpick
				☐ blocks me ☐ annoying ☐ nitpick

6 Overall questions

Which screen felt best, and why?

Which screen felt worst, and why?

What felt missing?

What felt unnecessary?
